6TH INTERNATIONAL PAEDS WORKSHOP IN FAISALABAD INSTITUTE OF CARDIOLOGY, FAISALABAD

INTRODUCTION

A therapeutic cardiac catheterization is a procedure performed to treat your child's heart defet. A doctor will use special techniques and a thin plastic spaghetti—like tyve ir catheter that goes to the heart from blood vessels in the legs or the neck. These techniques allow the repair to be done without surgically opening the chest and heart. The types of defects that can be repaired include closing a hole in the wall that separates the hearts' right and left sides. Widening a narrowed vessel or stiff valv, and closing abnormal blood vessels using a variety of devices.

There are different ways in which your child will be kept comfortable during his or her cardiac catheterization.

This work shop was arranged with the collaboration of HEART SAVERS FOUNDATION Medical Social Services Project FIC Faisalabad.
